Continental

Rediscovering the bike?

It's hard to believe, but over the past two years the 29er has finally established itself in the global market after almost a decade of trying, and now there's already a new wheel size on the scene, the 27.5". The effects of such rapid diversification in wheel sizes present both opportunities and challenges.

In some regions this innovation has led to a purchasing dilemma for consumers, because it is still not clear in which segment of the MTB market each tyre size will finally be established. What is certain however, is that with the subsequent growing market demand, increased storage and logistical expenditure is imminent, not only for us as tyre manufacturers, but also for the entire supply chain including wholesalers and dealers, but we are prepared.

For 2014, we can offer our customers all the various models for the relevant primary intended use in 26", 29" and 27.5" sizes from our three production facilities. Choose the right size for you and your customers from three different price and quality levels. Our selection of products ranges from our price and performance champions for daily use from our Indian factory, the new **performance products** from the newly built factory in Hefei, to the highest quality **premium tyres** from Korbach – with top of the range technology such as BlackChili and Protection models.

Our engineers continue to work on with complete conviction, especially with the new MTB tyre sizes, which have had countless top spots in tyre tests in the global cycling media: "Test winner Made in Germany". Millions have been invested in the Korbach factory, preparing production in Germany for the latest challenges and technological requirements, including for our new and once again improved premium product, the new GP 4000 S II.

Heading into 2014 this just proves that it is possible to produce competitive products in Germany, products which rank amongst the best in the world technologically. Continental is not only the sole German tyre manufacturer, but also the last of the big global bicycle tyre manufacturers who still produces the majority of its products in Europe. This aspect is not only highly motivational for our development team and our employees, but is also a real commitment.

We would like to thank you for your interest and confidence in "German technology" and wish you a successful business year and an excellent cycling season in 2014.

Have fun discovering and experiencing Continental products!

Head of Marketing/Sales/R&D

Technology made in Germany

BlackChili Compound

This unique tread rubber mixture which is only produced in our German factory has revolutionised bicycle tyres. The resultant compound showed a new relationship between grip and rolling resistance. This 'Elevated level', as it was previously known, was given the name 'BlackChili'. Countless test wins that were shown in laboratory tests show a tangible benefit. The latest polymers, nanoscale soot particles and optimized fillers all guarantee a unique performance, from downhill MTB tyres to the time trial tyres of the ProTour, they are second to none in their respective areas. BlackChili Compound improves rolling resistance by 26 % and provides 30 % more grip than activated silica compounds. Premium tyres with BlackChili Compound also impress with higher mileage and unlike many multi-compounds, provide a constant ride from the first to the last kilometre.

Vectran™'s advantage

Vectran™ is spun from Vectra liquid crystal polymer, which results in a thread that is thermoplastic and has multifilaments. This semicrystalline material is harder than aramid, has five times higher tensile strength than steel and in addition, is also lighter than comparable nylon thread. Vectran™ maintains these attributes even in the most adverse weather conditions.

PolyX Breaker® – built to resist!

With the PolyX Breaker®, we are bringing our car expertise to the bicycle tyre sector. Polyester has been used successfully in car tyres for years and has proven itself over and over. The highly durable polyester thread is cross-stitched with a close mesh. As a result, very high fabric density is achieved, which not only makes the breaker more durable against foreign objects, but also particularly resistant to punctures.

Race sport – easy, quick and secure.

Uncompromisingly designed for mountain bike XC and marathon racing. The race sport casings combine consistent lightweight design and exceptional puncture protection at the highest level. The design makes the difference – an especially fine, high quality nylon fabric with an intricate and universally protective rubber casing, together with the legendary BlackChili Compound for the ultimate race day tyre.

ProTectiON – carefree epic ride.

Better than ever before – our new ProTectiON carcass is ready for duty! The addition of a ProTectiON layer under the tread and in the sidewalls makes it particularly durable and resistant to injury/damage or penetration from foreign objects. Universally applicable, they also inspire with BlackChili Compound, attractive design and low weight. In addition, they are easily converted to tubeless as they now feature a tubeless compatible bead.

"Golden times" for the tyres 'made in Korbach'

During the 2012 Olympic Games and at last year's world championships, our products were positively glowing gold. Our 'made in Korbach' performance tyres had a spectacular winning streak, securing six Olympic gold medals and five world championship titles. XC rider, Julie Bresset, simply dominated in the ladies mtb circuit with her wins at the Olympics, the world championships and at a national level. Marianne Vos and Philippe Gilbert also won their respective Olympic road races, later adding world championships titles to their tally of successes. In London, Alistair Brownlee became the new star in the Olympic triathlon and Rachel Atherton justified her ambitions as a top athlete by securing the overall world cup title in downhill.

The continuous dialogue between our engineers and top cyclists fuels the ongoing development of our products and enables them to achieve new levels of performance time and time again. Our developers and top sportsmen and women regard one another with mutual pride and respect for their achievements helping to pursue their passion for new goals together.

After all, it is the high quality "handmade in Germany" tyres from the Korbach plant which make that subtle difference. These products are made by specialists for specialists.

Race tyres

Set Grand Prix Attack & Force

The road racers choice.

We continually develop our premium race tyre set, GP Attack & Force via our relationship with professional race teams. With this feedback and advances made in our technology, our serial production tyres are constantly improved. With the Grand Prix Attack and Force Set, the 22 mm front fitment Grand Prix Attack puts its face to the wind. The aerodynamic form of the tyre gives a faster ride and the lower tyre profile more agility. The 24 mm Grand Prix Force on the back wheel has a broader contact patch: This gives it more traction coupled with a higher mileage. Our premium racing tyre set gets the full premium build treatment, BlackChili Compound and a Vectran™ anti-puncture breaker – applied manually – in Germany!

Grand Prix 4000 S II

The reference tyres.

The Grand Prix 4000 S II is the reference tyre in the road bike market and has gone through numerous stages of evolution. Our flagship tyre now gets a facelift! The discreet bead strip allows us to colour coordinate the tyre to match your bike perfectly without losing the BlackChili tread performance. We have also expanded the size range with an additional 28 mm version added. This provides improved grip in poor riding conditions, increased puncture protection and greater comfort. The proven aspects of the 4000 S II remain unchanged. Vectran™ Breaker for unsurpassed puncture protection, advanced BlackChili Compound for low rolling resistance and sensational grip, and handmade in Germany of course!

You can't go faster, can you?

The Grand Prix TT follows in the tracks of the time trial tubular tyre Podium TT: a pure time trial tyre for serious competitors. Its ambitions are already optically apparent. A slick centre tread profile ensures a few seconds are saved whilst the slightly roughened shoulders give that extra assurance on rougher B road bends. Particularly light thanks to a minimised tread and indescribably fast due to the latest "BlackChili Compound".

Its Vectran™ Breaker protects reliably from the threat of punctures on rougher roads. Handmade in Germany – of course! **A pure race tyre with reduced puncture protection and reduced mileage!**

Grand Prix TT

Limited Edition

Faster than the speed of sound!

With the Grand Prix Supersonic your contact with the road can be tuned to minimum weight and minimum rolling resistance. Together with a "Race 28 Supersonic" inner tube, our quickest tyre & tube set weighs only 200 g! The slick rolling area made out of a carbon black mixture looks cool and is of course made using our BlackChili recipe. But be cautious! The Grand Prix Supersonic is a very apt weapon in fighting for a personal best time, although for this extra speed, the tyre does not feature any additional puncture protection and has limited mileage use. With this in mind, the Grand Prix Supersonic is not a tyre for training!

Race tyres

Grand Prix 4-Season

Technology from hell!

Thanks to its DuraSkin® anti-tear fabric, the Grand Prix 4-Season holds up under extreme conditions. In the Paris-Roubaix race, the “Hell of the North”, cyclists equipped with DuraSkin® enhanced tyres have the fewest tyre related problems during the race. Incorporating our special wear resistant carbon compound, the tyre is characterized by very good mileage performance as well as excellent adhesion on wet roads and at low temperatures. With the 23 mm, 25 mm and 28 mm versions, the Grand Prix 4-Season makes it possible to select the right tyre for various road qualities and comfort requirements. A double Vectran™ Breaker belt under the tread raises the puncture and cut protection to the highest level available on the market. “The Continental GP 4-Season is the standard: full score in all categories! The tyre is lightweight and rolls well. It achieved by far the best result in offering fantastic grip and puncture protection, even in the wet and cold. Not just the top winter tyre.” The test results from Road Bike Magazine 02/11.

Vectran™ BREAKER  **DuraSkin®**

Grand Prix

Fulfilling the legacy!

The Continental Grand Prix tyre is ingrained in cycle racing history. In the late eighties, it heralded the triumphant entry of the modern racing bike ‘clincher’ and is today a synonym for quality and performance. This latest incarnation shines thanks to a PolyX Breaker® layer in the casing and a BlackChili Compound with an impressive combination of puncture protection, easy running, durability and grip. The modern profile design and the TWI (wear indicator) round off the performance. “Handmade in Germany” as folding and wired tyres in the classic racing dimension 23-622 and many other sizes.

BLACKCHILI COMPOUND  **PolyX Breaker®**

The modern classic.

It is not only visually that the authentic design of the Grand Prix Classic upgrades any retro race bike, or modern for that matter! It's what's inside that also counts, after all this new addition to the Continental range, with its brown sidewalls and Conti Sport-Profil tread from 1982 is actually based on the current Grand Prix tyre. Thanks to a PolyX Breaker®, highly stable and fine 180 TPI nylon carcass and the legendary BlackChili Compound, it presents itself technically as a state-of-the-art racing tyre. The contemporary dimensions 25-622, a folding bead – Handmade in Germany – guarantee comfort and light running.

Grand Prix Classic

The roller tyre.

With a modern roller and the Hometrainer in the house, winter can set in when it wants to. Thanks to its special cold-running compound, the Hometrainer doesn't experience the heat buildup of a road tyre, nor does it suffer the tread separation that the road tyre is prone to under the special loads that occur when cycling and braking on the roller's revolving drums.

Race tyres

Gator Hardshell

MORE is what you get!

The Ultra Gatorskin has set the bar for a perfectly-balanced blend of ride quality and long-term durability without breaking the bank ... but still the roads of North America and Great Britain demand more! The Gator Hardshell delivers!!! Sharing the bead-to-bead protection of DuraSkin®, the Hardshell casing wraps further into the sidewall and an extra-wide PolyX Breaker® covers the entire tread strip from shoulder-to-shoulder. Added material under the tread strip not only improves mileage, but lends yet another degree of puncture resistance. More isn't always better, but in this case – MORE is what you get. Now includes a 700 x 28C and 700 x 32C foldable size.

The long distance runner.

A durable carbon black mixture, a well regarded puncture protection system and the DuraSkin® -anti-cut fabric turn the Gatorskin, formerly known as Ultra Gatorskin, into a real long distance runner. In varying widths from 23 mm to 32 mm it can be used on the way to work as well as training for road races or for sportives and audax. The Gatorskin is a highly popular tyre at a nice price which now includes folding options in 28-622 & 32-622.

PolyX Breaker® **DuraSkin®**

Gatorskin

Race tyres

Grand Sport Extra/Race/Light

Performance for every occasion.

The Grand Sport family is based on a solid 60 TPI casing, a NyTech breaker and the durable and super grippy PureGrip tread compound. We have designed each tyre for a particular use. The **Grand Sport Extra** offers pure puncture protection. The doubled up NyTech breaker and a three layer sidewall make it a reliable work horse, ideal for heavy training and tough racing conditions. The **Grand Sport Race** is designed as a balanced, all-around tyre. The NyTech breaker and sufficient PureGrip compound in the tread give confidence for effortless and countless racing and training kilometres. The **Grand Sport Light**, in contrast, has been designed as a competitive tyre, the reduced PureGrip compound saves weight, but at the cost of longevity. A good level of puncture protection is provided by the NyTech Breaker.

Ultra Sport II

The entry level tyre for the aspiring racer.

The Ultra Sport offers everything you need performance wise for racing. Reliable puncture protection from the robust 3/180 TPI design, good grip and a long tread life from the silica based compound. Tyre sizes are available to cover a range of intended uses. For racing there is the 23 mm width, touring and long-distance cyclists may favour the more forgiving 25 mm size and if the frame allows, a 28 mm version offers more grip, even more comfort and greater puncture protection, attributes which even professional cyclists crave for the Spring Classics.

Cycle couriers, regular commuters and fixie riders!

The Super Sport Plus uses the proven profile of the good old Grand Prix with added Plus Breaker, guaranteeing the highest puncture protection. A more robust, extra thick casing means excellent sidewall durability and an especially thick tread provides greater longevity. Cycle couriers, regular commuters and fixie riders, this is YOUR tyre!

Tubular tyres

Road

Set Attack Comp & Force Comp

World premiere!

The result of a collaboration between Continental and ProTour teams, this is a completely new type of tyre concept. The first TirePositioning® System (TPS) Tubular. At the front, the 22 mm narrow Attack Comp does its work and provides improved aerodynamics as well as high agility through faster transition into corners. At the rear, the Force Comp power machine at 24 mm provides a large contact area that guarantees a better power transmission as well as low rolling resistance. Couple this with a higher service mileage and a higher level of comfort thanks to the wider casing, and you get a tubular which is especially forgiving with today's ultra stiff racing bikes. This set is hand sewn in Korbach, and features our BlackChili Compound as well as Vectran™ Breaker anti puncture technology.

Competition

The Grand Master.

The Competition stands for true handwork with a needle and thread. It is the most dependable tyre in the pro peloton. It has proven itself time and time again on the world stage often accompanying prominent cyclists to their victory, just like Cadel Evans at the Tour de France in 2011. We are proud of our Competition, that's why we always keep it on the road to victory. The Competition was the first tyre in our range to be equipped with BlackChili Compound and Vectran™ Breaker.

Grand Prix 4000 S II Tubular

The moulded tubular tyre.

The 4000 S II Tubular has also had a facelift whilst retaining its core traits. A seamless casing design improves seating on the rim and the tyre's uniformity. Also unchanged for the 4000 S II tubular are the Vectran™ Breaker for unsurpassed puncture protection and the BlackChili Compound for low rolling resistance and superb grip. A winning tyre, handmade in Germany.

The time machine!

TT stands for time trial! In the race against the clock, entire tours are decided which is reason enough to offer an especially fast TT tyre, just look at Cadel Evans' victory in the 2011 Tour de France! Although designed as a time-trial specific tubular, the Podium TT is also popular among pros in regular road races. The reason for this is its design: Thanks to the latest BlackChili Compound, this Chrono-Specialist available in 19 and 22 mm widths is not only super-fast, its Vectran™ Breaker also offers excellent puncture protection. The Podium is a lightweight tubular tyre, weighing in at only 205 grams in its 22 mm width. Low weight means low rotation energy. The tread thickness has been reduced to 0.7 mm, enough for a few hard racing days. The ultra-fast slick tread shows you how fast it is even when it's not moving!

Tubular tyres

Road

Sprinter Gatorskin

The fast endurance runner.

Inheriting the best qualities of the highly popular Gatorskin road tyre, namely the durable carbon black tread mixture, the effective puncture protection breaker layer and the DuraSkin® anti-cut fabric. The Sprinter Gatorskin itself features the typically comfortable and light feel of a tubular tyre. The professional riders use a similar combination in their tyres for Paris - Roubaix and other equipment destroying classics in the springtime. If you want to 'get the miles in', but your streets aren't covered with the finest tarmac and you prefer the inconspicuous function of your tyres, then this is your tubular.

DuraSkin® **SafetySystem**

Sprinter

The specialist for circuit races or the criterium.

Its function is in its name. The Sprinter is a fast tyre for the shorter road events like criteriums. With a nylon puncture protection breaker it is now even more reliable without losing its terrific rolling qualities. Its flexible casing and the extremely adhesive BlackChili Compound keeps contact with the road even in fast 90° bends. With its low weight and good acceleration it is most definitely the fastest tyre in the last 400 metres.

SafetySystem

GERMANY, KORBACH

The tubular tyre for training.

Tubular tyres are used primarily in competitions because of their excellent rolling characteristics and very good dry running properties. With the Giro, you can also rely on these strengths in training. To ensure that this training tyre is excellent value for money, we have the no-frills, robustly manufactured Giro made to our specifications in Asia.

Giro

Note:

Carbon tubular cement for carbon rims must be handled differently to conventional tubular cement for aluminum rims. Always observe the processing information on the packaging.

Caution: You will find a detailed assembly film at “www.conti-bicycletyres.com/tubularmountinginstructions”

See accessories on page 66–67.

Simply scan the QR code and watch the film on mounting.

Tubular tyres

Track

Olympic II

The tubular for Olympic athletes.

Our target for this re-development can be described easily: Faster! Lighter! Better! The rolling resistance is further reduced without compromise; the last unnecessary gram of the tyre has been cut. This tyre is the pinnacle of our tubular range, manufactured and hand sewn using carefully selected components at our German factory in Korbach. This makes the Olympic II the specialist in all track cycling disciplines.

Sonderklasse II

Black Beauty on the track.

The special class is the reference in indoor track meetings. For generations a synonym for reliability – Appreciated worldwide and hotly desired by riders as well as mechanics. We have now optically updated the classic amongst our tubular tyres for the velodrome. Presented in a new all-black guise, underlining the special class even better and giving a nobler image. The innermost values remain untouched: high value nylon carcass and the classical “Handmade in Germany” treatment.

Tempo II

Speed is everything.

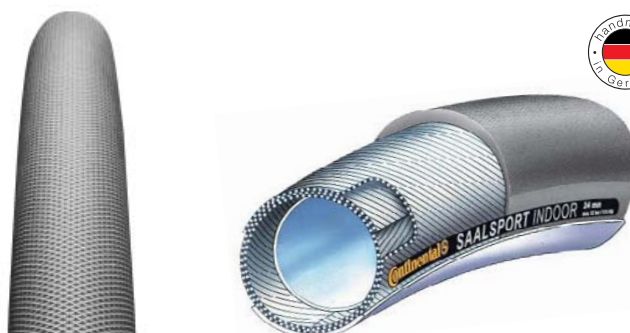

We've made the Tempo go even faster! With an extremely fine nylon carcass and the latest BlackChili Compound it is a credit to its name. Designed for the track, as a very light and extremely fast competition tubular tyre, it is also bought by famous professionals and “misused” for mountain stages and time trials. Handmade in Korbach, it is however not recommended for use in road races due to its uncompromising composition.

The specialist for artistic cycling, bicycle polo, cycle ball as well as indoor wheelchair sports.

The demands on tyres for indoor sports is becoming more and more specific so that floor adhesion is enhanced. Thanks to a new rubber mixture, visible marks on floors are out of the question. During indoor sports, tyres are subject to extremely high demands which the Saalsport resists due to its high strength carcass. A glued tubular tyre is essential due to the high transverse forces which exist in indoor cycle sports and wheelchair sports.

Multi-talented.

Cyclocross riders are truly multi-talented, strong on any type of terrain, combining the benefits of racing a road bike with that of a mountain bike. With the Continental cyclocross models you'll have the right tyre for any condition, from tyres made for speed over hard and sandy ground, to the tenacious all-rounder and to those with an open tread profile designed for maximum grip. There are also tyre options which are ideal for everyday use or for trekking bikes. Choose between ultra-light with BlackChili for competitions or more robust versions with extra puncture protection and reflective strips for leisure and off-road commuting use.

Clincher tyres

Cross Country

Mountain King CX

Welcome to the mud!

In muddy MTB cross-country races, the Mountain King has already made a name and is now the mud specialist in the cyclocross segment. Thanks to its deep profile, the Mountain King digs deep into the sturdier ground beneath any soft mud. The large studs also roll pretty well on harder ground. The shoulder lugs are intentionally separated from the centre lugs so that they can cut deep into the ground in cornering and off-camber terrain. BlackChili Compound offers outstanding grip with good self-cleaning. Feedback from testers: 'Like riding on a track'.

CycloXKing

The XKing for Cyclo-X.

After a successful start on the mountain bike scene, the XKing now also stirs excitement at cyclocross events. The powerful allrounder convinces by its quiet running, fast and at the same time extremely grippy profile. Thanks to a smooth 180 TPI nylon carcass and the latest BlackChili Compound the 32 mm wide folding tyre guarantees an outstanding performance on all sorts of surfaces. Ideal for competition and training – and not wider than allowed by the UCI! Made in Germany – of course!

Cyclocross Race

The CX racing clincher.

The Cyclocross race makes its case with a voluminous 35 mm carcass and has a racer's heart beat. It promises the convenience of riding tubulars without having to deal with the cumbersome cement. Even at low air pressure, perfect balance between grip, comfort and low rolling resistance is provided.

Cyclocross Speed

For hard and frozen ground.

The Cyclocross Speed is the first choice on a pure cross bike thanks to a diamond-coated centre section and coarse studs in the shoulder lugs.

The all-around genius for Cyclocross.

The first Cyclocross tubular tyres with BlackChili Compound, built and sewn by hand in the Korbach tubular manufacturing plant. The profile is derived from the all-around X-King MTB tyre. The alternating mid stubs roll cleanly especially on harder surfaces like compacted dry mud, pathways and tarmac sections; its raised outer stubs bite into every surface when cornering. The supple carcass deforms easily around surface edges meaning outstanding grip as the tyre grabs to any terrain it can thanks to this enhanced contact area. BlackChili Compound with its outstanding wet gripping properties makes the tyre an all-around weapon in the sport of cyclocross.

Mountain bike tyres

Der Kaiser 2.5

Spiritual head and secular ruler.

Our Dry to Intermediate DH tyre has been a regular at UCI World Cups over the past couple of seasons. If you are looking for an all round tyre to do some local races or an uplift day then look no further. The tread pattern is a perfect mix for speed and mud clearance. The BlackChilli Compound helps you stick to the ground even when hitting off camber turns flat out. This is the tyre that took Gee Atherton to his first WC win on home soil and on to the podium of the Red Bull Rampage! Now available in two formats. The BlackChilli version features the latest advancements in our German made rubber compounding and a standard version to help all those potential world champs get every second off their race time!

Der Kaiser 2.4 Projekt

“Dominance has a new name”.

For almost two years, Conti engineers worked together with some of the best downhillers and free riders in the world on ‘project’. Richey Schley’s commented the outcome: “You created a monster!” This monsters wedge shaped shoulder lugs provide a progressive cornering response. This easy-to-control feel makes the Emperor Project a tyre that really helps maintain speed in the corners. The ramps in the centre area roll up quickly and bite the ground when braking. A new Apex sidewall reinforcement and a two-ply carcass make the Emperor’s torsion and puncture resistance better than ever. The 2.4 carcass qualifies it as an agile weapon made for the hardest World Cup track. **“Handmade in Germany” World Cup tyres with reduced mileage!**

GEE ATHERTON
2012: DOWNHILL NATIONAL CHAMPION UK

Aristocracy has its duties.

"Der Baron" is our downhill intermediate option that can also provide an assured ride in damp conditions. The arrangement of studs is aimed at grip in loose rock & mud, whilst the casing holds up to serious World Cup level abuse, thanks in part to a special reinforced 'Apex' sidewall.

This extra thick, double-layer carcass effectively prevents pinch punctures & Der Baron uses a particularly soft (downhill) version of the legendary BlackChili Compound which provides unrivalled grip and rolling speed. The "little baron" puts a hard landing without grumbling away, but it rolls easily enough to come to their own strength to the summit. Clearly lighter than its big brother, he is able above all Freeriders and to inspire enduro riders. BlackChili Compounds high wear resistance both transforms performance and value for money – MORE GRIP, MORE TREAD LIFE.

Trail King 2.4/2.2

The King of the trails!

The combination of this tyre's tread pattern, Apex reinforced sidewalls and the extra soft BlackChili Compound make this tyre the king of the 2.4-inch market. It takes hard landings in its stride thanks to the specially reinforced sidewalls, whilst maintaining stable cornering control. Even with its outstanding grip, this tyre lasts, making it not only the perfect choice for freeriders, but also for Enduros. Its little 2.2 brother still hits the mark with its superb grip and unexpected low rolling resistance for long distance riding over a variety of terrain. Thanks to the innovative BlackChili Compound, the Trail King is a master of the demands and challenges of all mountain riding. Both sizes are available in folding and steel bead versions without Apex and BlackChili.

RICHIE SCHLEY
THE PIONEER OF THE FREERIDE MOVEMENT

Mud should not stop the game!

When cross country riders are slogging their way around the track in the rain, that's when you know it's time for the "Mud King" 1.8. Its outstanding profile grabs the surface even under the muddiest conditions. Thanks to BlackChili Compound, the tyre has excellent self-cleaning and offers a steady grip even on wet roots and stones.

It's narrow enough to fit into even the most cramped car boot and thanks to its reinforced ProTecton casing greatly reduces the chances of any unwanted punctures during the races.

Mud King + rain = fun in the mud!

Mountain King 2.4/2.2

Mountain King II – the new regent!

Now firmly into the second period of its reign, the Mountain King II strengthens its rule over the all-round trail bike market. Available in two sizes (2.2 & 2.4) superb braking traction and optimum cornering are guaranteed in all types of conditions. The tread lug arrangement was developed in collaboration with professional mountain bikers, resulting in an exceptionally light yet positively tough trail tyre. The ProTecton & UST model are the sensible choices for the majority whilst weight weenies and racers can take advantage of the RS (RaceSport) option. 29" and standard options are also available. Trail riders, Cross Country racers, Alpine tourists and Marathon riders – this is a serious intermediate tyre option.

“If ever there was a Swiss Army knife of tyres, this has to be it.”
– DIRT100 Magazine – 2012

“Continental BlackChili Compound is by far the longest lasting.” (bike 07/11)

X-King – The all-around genius!

The X-King model (pronounced cross king) fills the gap between the Race King and Mountain King II. Super-fast, yet extremely grippy, the X-King was developed in conjunction with the Topeak-Ergon MTB pro team. Along with the basic versions in 2.2" und 2.4" widths, the 'made in Korbach' RaceSport and ProTecton models come with the impressive BlackChili Compound with its unique combination of grip and fast rolling. Despite the proud tread, the X-King rolls fast and light. The highly puncture resistant ProTecton design is perfect for multi-day riding and racing while the weight optimised RS version is more suited to the xc and marathon circuit. Whether a solo or team rider, the X-King is suitable for all types of riding from xc to all-mountain in combination with our Race or Mountain King.

Mountain bike tyres

Race King 2.2/2.0

World Champions!

Now considered a legendary tyre, the Race King heralded the advent of the current Continental MTB tyre range. Irina Kalentieva won two World Championships on Race King tyres as well as countless other wins. When it's dry, the Race King is faster, cleaner and safer. Rolling resistance is almost on a par with race bike tyres. The RS and ProTecton models are developed and produced in Korbach, Germany with our best materials such as BlackChili Compound and they guarantee significantly better rolling resistance and puncture protection respectively.

GERMANY, KORBACH

The World Cup king!

Those who are familiar with the XC course in Offenburg know why the Speed King was developed. Hard, dry terrain where only one thing counts, speed. The semislick design is a stripped down tyre designed for minimum rolling resistance and minimal weight. The slightly raised outer tread gives sure grip for cornering at high speed. The central tread is a flat, wedge shaped design, keeping rolling resistance to a minimum, whilst still giving enough traction. The high volume 2.2 RaceSport casing can be ridden with low air pressures and offers reliable puncture protection for racing use. The minimal tread design of the Speed King trades reduced longevity and limited wet weather grip for pure speed. This is a thoroughbred dry weather racing tyre, handmade in Germany!

Speed King 2.2

Conti RevoSealant

For years Continental tyre sealants have been replacing the spare tyre in many vehicles. This technology has now been further enhanced especially to meet the requirements for use in bicycles and tubes. The ammonium- and protein-free RevoSealant provides reliable sealing for punctures and small cuts without chemically corroding the tyre or tube. The versatile RevoSealant is not only useful for repairs, but can also be used as a preventive measures in tubes, tubular tyres, and tubeless tyres. With suitable tyres, RevoSealant can also be used as a sealant for the Tubeless Ready systems which are popular on MTB's. RevoSealant, which is specially optimized for use in Continental cycle tyres, can be used in temperatures as low as -20° Celsius. Please carefully follow the accompanying assembly instructions.

Simply scan the QR code and watch the film on Tubeless-Ready tyre mounting.

Mountain bike tyres

Traffic 2.1/1.9/1.75

Bikes in the big city jungle.

The profile design was specially developed for everyday MTB use in urban and country areas. The centre bridge profile always provides a comfortable and fast run on the road, whilst its solid construction and robust sidewall make it an optimal companion when braving the dangers of big city road furniture, curbs and traffic. Also available with a reflective sidewall for added safety.

Traffic Plus

The Traffic in a bullet-proof vest!

If you are looking for a worry-free tyre for urban MTB commuting, then Traffic Plus is the right choice. The Plus Breaker protects the tyre reliably against all types of foreign objects. Whether glass shards, thorns or gravel, this tyre resists them all. The worry-free variety is ideal for high volume rental bikes or for riders who are not experienced at changing inner tubes.

Double Fighter II 1.9

For sporty MTB's and Trekking bikes.

Optically appealing to the leisure rider – fast on the road, grippy in the corners. In a sturdy gumwall design for urban biking, it rolls smoothly and quietly on asphalt. Its side lugs provide the necessary traction in the park and on gravel paths. The ideal combination for turning a proven knobbly all-terrain tyre into one good for zipping around the metro area.

The MTB tyre for true vikings.

Metal studs in the tread bars provide grip on ice and snow. Thanks to its open tread, it has good self-cleaning properties and gets to where it's going in mud and snow. The Spike Claw barely sinks into the surface by virtue of its large volume. Available with either 120 or 240 studs of hardened steel.

Spike Claw 2.1

Mountain bike tyres

Classic

Gravity 2.3

Biking pleasure on all trails.

Tyres with the width 2.3 are versatile. They can be used on forestry centre trails as well as daring downhill descents. The round tyre cross-section typical for Continental and the GravityArc™ tread lead to playful handling. The tyre can be turned easily in curves and reliably sinks its claws into loose surfaces. The Gravity's aggressive appearance does not contradict its running smoothness – an advantage that is appreciated especially on asphalt stretches. Incidentally, it's the tyre selected by a certain Greg "HB" Herbold.

Vapor 2.1

The Marathon specialist.

Designed as an intermediate tyre for cross country trail riding and racing, the Vapor concentrates on fast rolling, using the Gravity Arc tread design. Wide centre lugs keep the tyre rolling fast whilst the Arcs (lug bases) in the shoulders create stable handling under cornering for predictable handling.

Vertical 2.3

The modern classic.

The Vertical has everything a classic tyre needs. It is at home on all trails, really showing what it can do when the terrain turns rugged. Still the top choice for tours in Alpine terrain where low weight and high puncture protection are paramount. What the press say "If we were to choose one tyre to serve us all year round, it would be the Continental Vertical ProTecton ... We know riders who swear by these tyres and we can see why ..." MBR Magazine.

Explorer 2.1/1.75

The all-round athlete.

Exceptionally successful intermediate cross country tyre. Its spikey "Endless Edge" tread design hooks up on loose surfaces at all angles of lean and the sharp lugs clear mud efficiently for when the sky opens and the trails get rainswept. For the racers of tomorrow, the Explorer is available in smaller sizes for children's bikes.

Serving the community.

Police bike squadrons throughout the world use the Town & Country. Its high mileage, puncture resistance and last but not least low rolling resistance help make the streets a safer place.

Town & Country 2.1/1.9

The right choice.

The right tyres ensure safe and enjoyable cycling. Whether you are looking for puncture protection, grip, comfort, durability, smooth rolling or traction on any type of terrain. Whether you need an unusual or standard size, a tyre for specific conditions or an all-rounder. The model range is as diverse as the requirements for any city or trekking bike tyre. The choice is yours, so long as it's Continental.

City-/Trekking tyres

Top CONTACT II

The reference in the touring tyre.

The ultimate tyre for touring cyclists – Handmade in Germany. Thanks to the distinct centre tread and bionically designed, siped shoulders, it guarantees outstanding handling on all types of surfaces. The new, further developed tread mixture is super-fast and at the same time, durable and skid-resistant. The foldable version makes it even lighter and easier-to-mount. The fine, cut-resistant nylon carcass, the practically impenetrable Vectran™ Breaker and real German handwork all remain in this updated version.

Perfect traction for the cold winter months!

We have optimised the Top CONTACT Winter II further, refining it with a Vectran™ Breaker anti-puncture belt beneath the tread, as well as giving it a foldable bead. This optimises its weight reducing the rolling resistance thus increasing speed & handling characteristics. The tread mixture is directly based on our PKW snow tyres. The tyre operates at its best at temperatures between -25° and $+7^{\circ}$ C. Where other mixtures no longer have any grip, the Top CONTACT Winter II Premium's proven compound and tread pattern intermeshes with snow and cold, wet surfaces very well. Here the tyre is even more superior to spiked tyres which cannot straighten up on snow and shovelled streets. The reflective tyres provide additional safety in the dark winter nights and dusky days. Handmade in Germany!

Vectran™
BREAKER

ECO

For the northern winter.

We contribute all of our know-how as one of the leading automotive winter tyre producers into the new TopContact Winter II. And it shows. The tread design's outer appearance alone is convincing due to its never-ending grip. Thanks to countless lamellae, hundreds of biting edges permanently interlock with the surface. The tread compound that is adapted specifically to cold temperatures will even continue to get you going when other bike riders are spinning their wheels.

PolyX Breaker®

ECO

The winter tyre for grip on the ice!

Available with 120 or 240 studs of hardened steel, perfect for riding on icy surfaces.

Top CONTACT Winter II Premium

City-/Trekking tyres

E.CONTACT

An energetic cosmopolitan!

Tyres need to be a safe and reliable component on every bicycle. The higher speeds (of up to 50 km/h) and additional weight from the battery and drive system of an e-bike necessitate a specially designed tyre. A high quality reinforced casing (3 plies/180 TPI) with additional rubber forms the solid basis of the E.CONTACT. The SafetyPlus puncture protection, specially developed for the higher demands on e-bike tyres, provides reliable protection against punctures and cuts, avoiding expensive puncture repairs. The E.CONTACT tyre gives a smooth ride and with minimal rolling resistance thanks to the high elasticity of the rubber compound. This is a great all-round tyre which is home on tarmac as well as on gravel and forest trails.

CONTACT II

Speed, security and comfort – guaranteed!

The design brief for this tyre was to make it functional, sporty and secure. The grooves on the new three dimensional tread profile are arranged so that it stops foreign objects from getting stuck in them. A special lamellar structure provides sure grip and optimal contact with the ground. This tyre rolls fast and does its job as a puncture proof, all-round tyre. Naturally, it comes with the proven SafetySystem Breaker and reflective strips – as an option.

The globetrotter.

You can't develop a tyre for globetrotters on the drawing board. So that is why all of Tilmann Waldthaler's experience has been put to use in the development of the TravelContact. His requirements were obvious: a robust carcass with a high carrying capacity and protection against chafing and cuts, effective puncture resistance and last but not least, a tread that makes it possible to explore paths around the world quickly and safely. A foldable version is of course also available to take along as a spare. The TravelContact is ideal for touring all kinds of routes – along the Weser river in Germany or the best bikespots in the world.

Travel CONTACT

Traffic signal sprinter!

The Sport CONTACT turns any bike into a racer. The 26" version helps the bike messenger meet those deadlines while the 700C tyre gets the fitness biker into a speed frenzy. All this added speed for your bike with zero detriment to puncture protection and reliability!

Cruise CONTACT

Size does matter.

The Cruise Contact combines impressive comfort, a smooth ride and security. The large air volume provides a impressive 'suspension' effect and the dynamic tread profile provides safe riding on the most uneven of roads. Speed and puncture protection comes from the tried and tested design of the Contact tyre family; its fine nylon casing and SafetySystem Breaker. The high volume dimensions across the sizing range gives all the benefits of a balloon tyre. Available in new colours and sizes for 2014.

Ride with Style.

The cool graphics make the Retro Ride stand out. Offered in a stylish grey or cream finish, its tread profile is based on that of the renowned Conti KKS 10 moped tyre. Beneath the stylish outer casing it has all the qualities which go into making a top touring tyre; robust puncture ProTecton, high durability and good grip. Now available in the new sizes 55-559 and 55-622.

Retro RIDE

City-/Trekking tyres

Town RIDE

Routinely to your destination.

The Town RIDE stands for dynamics and safety. Cyclists appreciate its closed tread band in the centre and the skid-resistant profile blocks in the shoulder. Dynamics and safety also in the design. The light skin wall sidewall saves weight and reduces the rolling resistance. Continental Puncture ProTction reliably provides for necessary puncture defenses.

City RIDE II

The stylish metropolitan.

Comfortable and safe cycling in the city with the City RIDE II for the simply pleasure of riding. Its new profile design provides a greater contact area on the road and lower rolling resistance. The puncture protection insert helps prevent unnecessary delays on the way to work or on your shopping trips.

Speed on all terrains.

The Speed RIDE is the specialist for fast riding on harder surfaces. Whether asphalt, gravel or forest paths, thanks to the diamond-coated tread, the tyre rolls off quickly and quietly. Its shoulder lugs give the necessary grip in cornering and with a folding bead version, all important weight is reduced further on the sporty 'cross commuter bike'. Optional reflective strips for more safety. Continental Puncture ProTction supplies adequate resistance to flats.

Speed RIDE

The multitalented.

In the MTB world, it is celebrated a fast allrounder. Now the X-King has an option for today's, more versatile cross bike. Thanks to the offset centre lugs, the tyre rolls well on all types of underground. The raised outer lugs with their renowned design and arrangement provide the grip that you would expect for an off-road tyre. The tyre is the first choice for everyone who wants an assured level of grip on the wide variety of terrains that these bikes are capable of riding on. No matter where the trip takes you, the Cross RIDE with Puncture ProTction is your constant companion.

PU

Versatile, safe and durable.

The TourRIDE offers everything a real all-round tyre needs. A tread for every intended surface, the obligatory breakdown protection belt and a high mileage compound ensure the TourRIDE is a trustworthy option for many carefree miles. Available in a very wide range of sizes making it an ideal workshop tyre to service a variety of different bicycle types.

Tour RIDE

STOP
SAFETY FIRST

Maximum safety.

We don't like punctures! The Plus tyre range offers you effective protection against flat tyres. An almost impenetrable puncture protection bead made out of highly elastic special rubber guarantees safety during all journeys. Shards of glass, nails and even drawing pins don't stand a chance. From the choice of numerous profiles and sizes there is a tyre for all uses to get you safely from A to B.

Tip: Combine the Plus tyres with a Hermetic Plus tube. This thicker and stronger tube stays inflated for longer and has a greater resistance to punctures. Bike shops swear by this combination.

Our conversations over the years with New York's toughest Fixie riders, the messengers of CycleHawk NY, continually provides us with new insights into the high demands placed on these rider's tyres.

NB:

Please always make sure you have the right air pressure.

Further details on page 77.

Plus tyres

Traffic Plus

The traffic in bullet-proof vests.

If you are looking for worry-free tyres, then Traffic Plus is the right choice. The Plus Breaker protects the tyres reliably against all types of foreign objects. Whether glass shards, thorns or gravel, the tyre resists them all. The worry-free variety for high rental needs or puncture-free ATB mounting.

Country Plus

Carefree riding on country paths & lanes.

The Country Plus is just the thing for carefree riding on country paths & lanes. Thorns lose their sting – at least as far as the tyres are concerned, and the tread is ideally patterned for field and forest excursions. The tough Plus Breaker effectively fends off thorns and stones.

No fear of bedeviling flats!

The Touring Plus is an excellent choice for any and every touring and commuting bicycle. Its balanced tread pattern has bikes rolling effortlessly down roads and paths, while its finely siped shoulder blocks provide surefooted grip in corners. The Plus Breaker and highly visible reflective sidewall make for top-level safety. No wonder our Touring Plus is one of the most popular and frequently used bike tyres anywhere.

Touring Plus

Cycle couriers, regular commuters and fixie riders!

The Super Sport Plus uses the proven profile of the good old Grand Prix with added Plus Breaker, guaranteeing the highest puncture protection. A more robust, extra thick casing means excellent sidewall durability and an especially thick tread provides greater longevity. Cycle couriers, regular commuters and fixie riders, this is YOUR tyre!

Super Sport Plus

Tubes, rim tape, accessories, details which make all the difference.

It is often the small, unseen things which make it possible to get the most out of a product. For example using our Continental Revolution Sealant or a suitable and pressure resistant rim tape, like the Continental Easy Tape, which is available in many widths. Our tubular cement has also been tried and tested in cycling for many years, securing tubulars to aluminium rims as well as to carbon rims with our carbon specific version. These products along with our valve extensions, available in various lengths are indispensable accessories for bike racing. Continental tubes, which are made out of high quality butyl rubber with even wall thickness, are available in all possible sizes, styles and valve types and are all listed in order in the new, user friendly ContiTube System. We develop and manufacture all these small, useful products with the same care and precision with which we manufacture our other cutting edge products, because it's the detail which make the difference.

Simply scan the QR code and watch the film on mounting.

Bicycle tyre tubes

The new ContiTube bicycle tube program makes it easier for you to find the ideal tube for your cycling demands. The user-friendly tube system is suitable for any size, length, design, type of valve and perfect for any tyre dimension and riding occasion. Varying tube types can affect your tyres' handling characteristics: the Standard tube, available in all dimensions is the best choice for everyday cycling whilst Light & Supersonic varieties give racers the option of lower rotating weight, therefore increasing speed. The lightweight tubes have a lower thickness and so it is imperative that inflation pressures are maintained to prevent the risk of pinch flats.

For worry free cycling, we recommend the Hermetic Plus tube. Its improved formula is lighter and more compact, which renders it very puncture resistant in the presence of higher butyl amounts and greater wall thickness. Since it retains air longer, it's a favourite among bicycle rental agencies. Our Freeride and Downhill tubes are especially strong and bulky, which make it one of our favourites, since their extra wall thickness effectively protects against punctures.

Tyre levers [3–4]

Continental tyre levers made with fibre-reinforced plastic make changing tyres as easy as can be, without damaging the rim. The remarkably user-friendly MTB model can also be easily fastened to a spoke during disassembly, thus replacing the “third hand”. The form of the race models is customized to meet the requirements of a high-pressure tyre. The broad and flat lift surface also allows for perfect handling even on tight fitting tyres.

Conti RevoSealant [11]

For years Continental tyre sealants have been replacing the spare tyre in many vehicles. This technology has now been further enhanced especially to meet the requirements for use in bicycles and tubes. The ammonium- and protein-free RevoSealant provides reliable sealing for punctures and small cuts without chemically corroding the tyre or tube. The versatile RevoSealant is not only useful for repairs, but can also be used as a preventive measures in tubes, tubular tyres, and tubeless tyres. With suitable tyres, RevoSealant can also be used as a sealant for the Tubeless Ready systems which are popular on MTB's. RevoSealant, which is specially optimized for use in Continental cycle tyres, can be used in temperatures as low as –20° Celsius. Please carefully follow the accompanying assembly instructions.

0140050	Continental RevoSealant 1000 ml	6

Rim Strip [12]

Small component = large impact.

A poorly constructed or unsuitable tyre rim tape can be the cause of many punctures. It is especially important with hollow section rims to use a pressure-resistant rim band which covers the entire rim. The fabric-reinforced Continental Easy Tape rim protector is designed for use under high air pressure conditions. The various widths enable a perfect fit for all standard rims. The high pressure design for racing cyclists withstands up to 220 PSI, without becoming deformed. The flat construction type also significantly eases the job of tyre fitting.

Technology made in Germany.

The constant strive for perfection drives our engineers and developers to exceptional new heights in achievements time and time again. This gives rise to ground-breaking developments which are continually incorporated into our products and motivates our specialists to continue to develop pioneering “Made in Germany” technologies and innovations. This is all with one clear and simple goal in mind; to create the optimal tyres for every use.

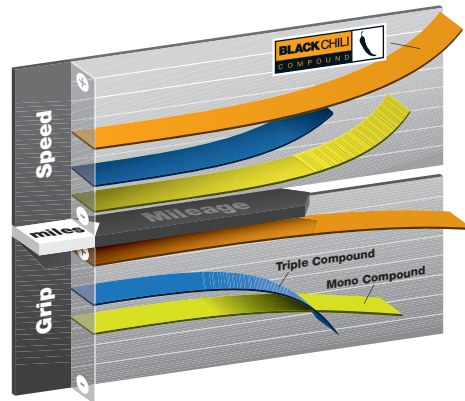

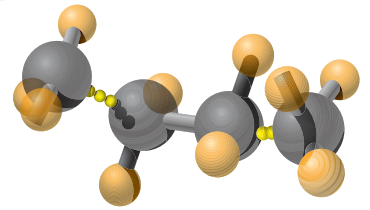

Deutsche Technik in detail

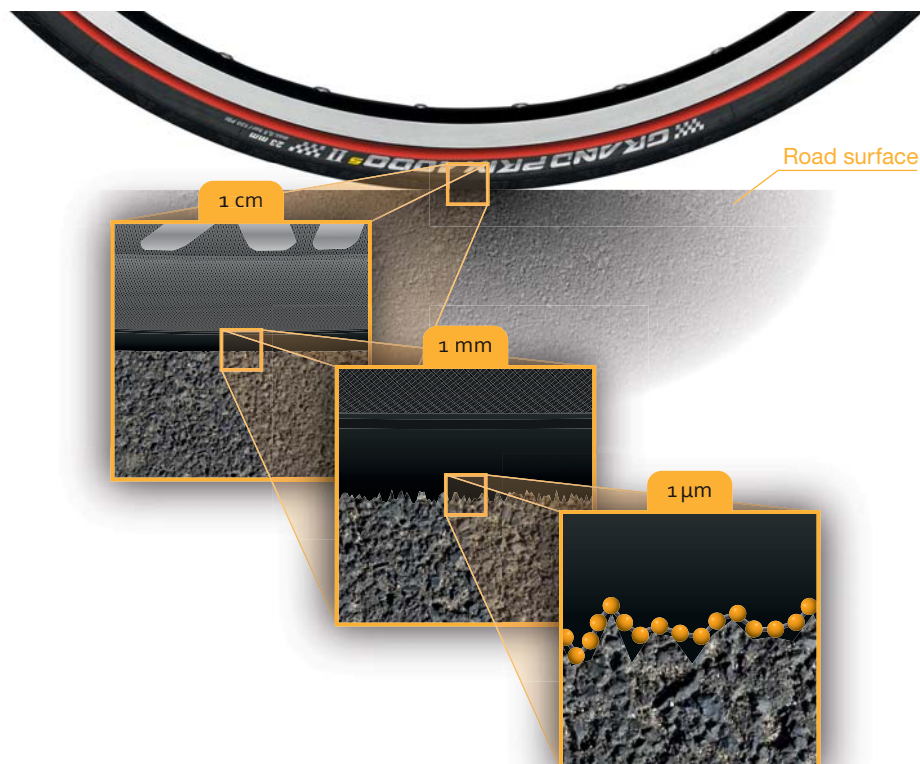

BlackChili Compound – it's all about how you mix it.

In the research and development laboratories for Continental bicycle tyres in Korbach, Germany, the staff and engineers have been looking for the solution to one of the fundamental problems of tyre construction: The running properties of the rubber compound of a tyre are largely determined by three interacting factors: static friction (grip), rolling resistance and mileage. The dilemma is that you improve one of these factors, and in turn, worsen at least one other factor. A tyre with maximum grip wears out faster and rolls slower. If one makes the tyre faster or more durable, then this in turn reduces grip. With the then current highest standard of compound technology, the Activated Silica Compound having already reached a very high standard of compromise, our developers wanted to take compounding to an even higher level. This led them to venture into new territory, exploring new ways so that in 2005 they made a breakthrough in mixing technology, the first steps to what is now known as BlackChili. This revolutionary compound is based on the latest findings on polymer and other raw material research.

For BlackChili we refine newly developed synthetic rubbers with natural rubber with the proven high-performance tread compound. We use these rubbers with special nanometric carbon soot particles, which are optimized in shape and surface properties for best uses for the intended tyre. BlackChili Compound reaches an unprecedented level of performance.

Tyres with BlackChili Compound reach an unprecedented level of performance. Compared to the previous best Activated Silica Compound, BlackChili tyres have 26 % less rolling resistance, a 30 % higher friction value (grip) and a 5 % increase in mileage. BlackChili technology never stands still as it is continuously developed and tailored to the individual applications of new Continental tyres as they continue to be produced out of the Korbach factory. Whether on the road or mountain bike, speed and grip advantages are very noticeable. The complex compound technology is so sensitive that tyres with BlackChili Compound can only be produced exclusively in our German Korbach factory.

PURE GRIP COMPOUND

PureGrip Compound.

Based on activated silica compounds, this technology was originally intended as an performance level compound, but after intensive development at our Korbach Research and Development Department Facility, an advanced new compound with outstanding grip and cross-country properties was developed. This new rubber mix, given the self explanatory name "PureGrip", is ranked just behind our BlackChili Compound and is being used in our performance products both in the road and mountain bike sectors. Whilst providing great grip, it is also long lasting and highly durable – both characteristics of Continental tyres, which are exclusively manufactured in the factory in Hefei (Asia).

TWI – The wear indicator

The wear rate and condition of any 'treaded' tyre like an MTB or touring model can be easily recognised by the obvious visual signs of wear to these tread lugs. Smooth or slick road tyres however do not offer any indication for their timely replacement. That is why Continental introduced wear indicators for smooth racing tyres back in 2004 on the Grand Prix 4000. The TWIs (Tread Wear Indicators) are on practically every Continental racing tyre these days. If the two small, circular depressions can no longer be seen in the middle of the tread, it is time for a replacement. This is an important aspect for rider safety as a worn tyre's riding characteristics are no longer adequate. The wear indicators have also found their way into City trekking and e-bike tyres. The Top CONTACT II has a small crosspiece in the base of the tread groove which should show a minimum profile depth of at least 1.6 mm. You can recognise Continental bicycle tyres with TWIs by the corresponding marking on the sidewall.

TirePositioning® System

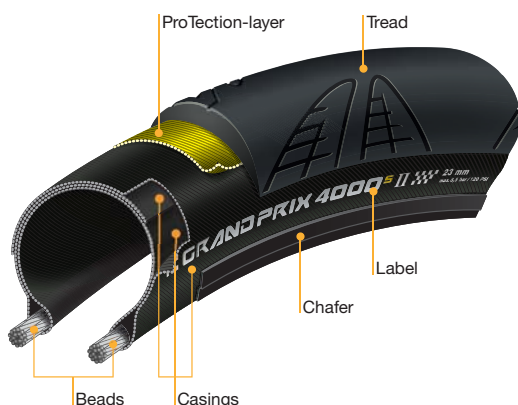

With the TirePositioning® System, the last little bit of what is currently technically possible has been exploited. Motorcyclists have known for a long time: Different demands are made on a front tyre than on its rear counterpart. The narrower front tyre provides reduced wind resistance and better handling. An adhesion-optimised tread mixture supplies the necessary grip especially for wet cornering. The wide rear tyre offers better traction thanks to a larger contact area and at the same time more comfort. Thanks to the fast rolling, optimised tread mixture and the larger contact area on the rear tyre, wear is reduced. The result is a pioneering front tyre and rear tyre system for road

racing; to be found in our GP Attack and Force combination. –

New since 2013: The first tubulars featuring the TPS system!

Grand Prix 4000 S II:
3/330 + Vectran™
Breaker is equivalent to:
3 Fabric plies/3*110 TPI +
Vectran™ Breaker
Contact: 3/180 +
SafetySystem™ is
equivalent to:
3 Fabric plies/3*60 TPI +
SafetySystem Breaker
Olympic: 2/220 is
equivalent to: 2 plies
(aramid in this
case)/2*110 TPI

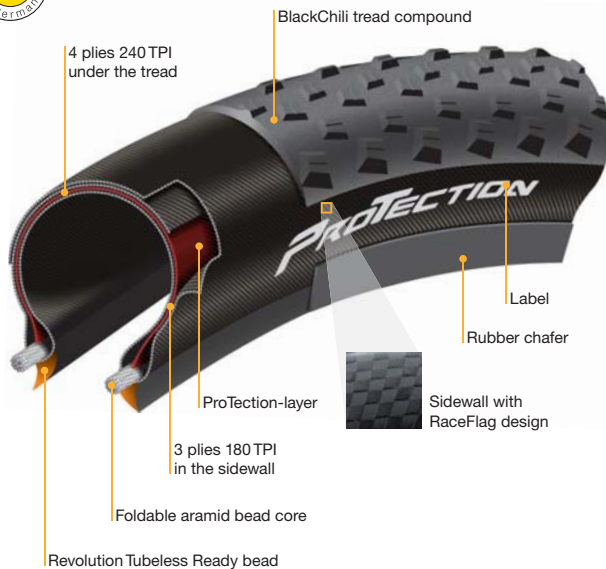

Casing construction & TPI – the makeup of the basic tyre structure.

The carcass is the basic structure for all tyres. The construction of the carcass, the material and the thickness of the thread depends on the demands that are placed on the tyre. Continental always works with high-quality carcasses made from nylon strings that are first woven and then rubberised. Nylon can be easily combined with rubber and is durable in all types of weather. The thickness of the thread gives the tyre its specific attributes. Thread thickness is recorded in TPI (threads per inch) and describes the number of threads per 2.54 cm (1 inch). Fabrics used have 22 TPI, 28 TPI, 60 TPI and 110 TPI. Very fine material makes the tyre smoother and protects the carcass from punctures. Coarse fabric is more cut-resistant and makes the tyre more robust. The choice of fabric correlates to the purpose of use. The standard is a three-ply basic carcass. Additional breakers can be put under the tread in order to reinforce the tyre even more and to increase puncture protection. There are different types of breaker builds and materials for different uses whether they are highly elastic specialty rubber, such as our Plus brand or fabric breakers, such as PolyX and Vectran™ in our race tyres. You can see how the tyre is constructed in the tyre specification. Points listed are the number of layers, the sum of the TPI and the type of puncture protection. 3/180 + Vectran™ is equivalent to three layers of a 60 TPI fabric with an additional Vectran™ Breaker.

Breaker Technology from Germany – Puncture Resistance in detail

ProTecton

ProTecton – the hard way.

Better than ever before, the new Continental ProTecton casing. The extra all-round puncture protection layer renders the casings especially durable and insensitive to damage or penetration from foreign elements. Treads and sidewalls are equally protected, and are 25 % lighter and offer 30 % more puncture protection than their predecessors protected by DuraSkin®. Rolling resistance and absorption has also significantly improved.

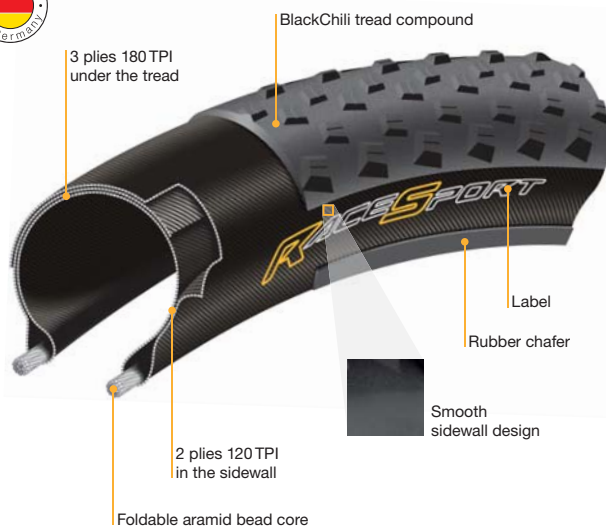

The new Made in Germany technology allows it to withstand even the hardest trails across the world. What's more: they're universally usable, are inspired by BlackChili Compound and have an aesthetically pleasing sidewall design. The new Revolution Tubeless Ready Bead improves the application of Tubeless Ready Tyres. For optimal results with sealing for tubeless use and whilst riding, we recommend the application of the new Continental RevoSealant.

Technology:

- BlackChili Compound
- Tubeless Ready bead
- Revolution Tubeless Ready base
- 4/240 threads per inch (TPI)
- Flag Sidewall design

RaceSport

RaceSport – light, quick, safe.

Uncompromisingly designed for use in mountain bike racing: the RaceSport carcass combines logical light construction and noticeably better protection against flat tyres at the very highest level. Together with professional mountain bikers, we have created the perfect platform for competition tyres. Hand produced in Germany, they offer a 30 % better protection against flat tyres than Supersonic tyres. The construction makes the difference – particularly fine and high-grade nylon fabric with an expensive, protective rubber lining and a universal bead. Together with the legendary BlackChili Compound, this is the ultimate combination for XC racing and marathon/endurance events.

Technology:

- BlackChili Compound
- Universal bead
- 3/180 threads per inch (TPI)
- particularly robust tread and fabric rubber lining
- Smooth side wall

Apex

The sidewalls of freeride and downhill tyres are subjected to extraordinarily high loads. A rubber profile between the carcass layers ensures stability. The Apex sits on the tyre bead and reinforces the sidewalls of the tyre. The tyre is thus protected from impact with the rim during rough rides over rocky ground. The tyre stays more upright when cornering. It does not bend over the sides of the rim when subjected to transverse loads, and always stays true to the course.

Apex

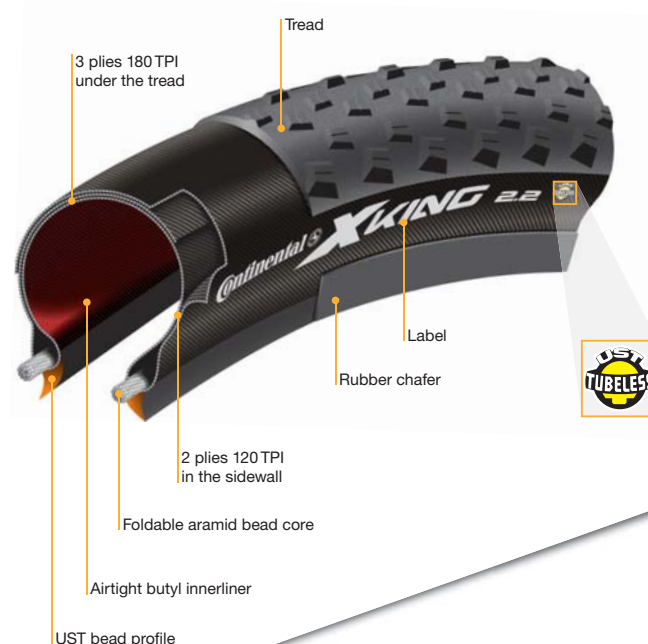

Continental Tubeless Tyres for the Universal System Tubeless.

Tubeless Tyres by Continental work with both UST and Rigida/Nagesti rims and wheels. The tyre and rim form an airtight chamber. A tube is not necessary and pinchflats not possible anymore. In comparison to the conventional system, the tyre pressure can be lowered and the comfort of the ride increases. At a lower tyre pressure the tyre deforms more easily and so the contact patch of the tyre increases and the tread adapts to the ground more quickly, improving traction.

UST

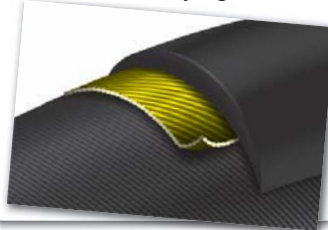

Breaker Technology from Germany – Puncture Resistance in detail

Vectran™
BREAKER

The benchmark in puncture protection.

Vectran™ is a synthetically manufactured high-tech fibre from a natural model. Like spider silk, Vectran™ is a liquid-crystalline polymer (LCP). Vectran™ is spun from the melted liquid polymer Vectra and processed further to a multi-strand thread. Spider silk like Vectran™ has an enormous tear resistance at a very low weight: Exactly the right properties to process into a premium Continental bicycle tyre as a puncture protection insert. A Vectran™ Breaker is lighter, more flexible and protects more effectively against cuts than the comparable nylon breaker. Vectran™ Breaker does not adversely affect the rolling resistance.

Plus Breaker – Maximum safety!

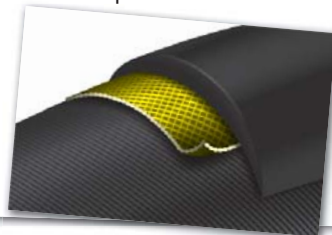

Between the tread and the carcass, a puncture protection of highly elastic special rubber is used. This practically impenetrable puncture protection successfully defies all types of foreign objects from getting to the inner tube below. Even a drawing pin cannot get through. Tyres with Plus Breaker can be seen in almost every segment nowadays: Whether racing cycles, MTB or city/trekking, the Plus Breaker guarantees maximum safety without negatively affecting the cycle properties of the tyre. The consistency of the breaker has been adjusted so that the tyre does not feel spongy when cornering. The Plus Breaker is true puncture protection. Please read the air pressure instructions!

PolyX Breaker®

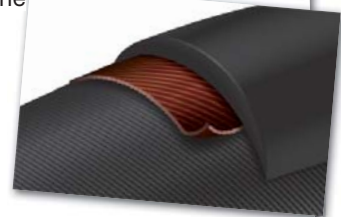

Puncture-defence

With our PolyX Breaker®, we bring PKW know-how to the bicycle tyre segment: Polyester has been used successfully for years in car tyres and been tried and tested many times. The extremely resistant polyester fibre is woven tightly crosswise. In this way, a very high fabric density is reached which not only makes the Breaker more resistant to foreign objects but is also especially resistant to punctures. The rolling resistance is also not negatively affected by the PolyX Breaker®.

SafetySystem Breaker – Puncture protection with a system.

The SafetySystem Breaker is made up of Kevlar-reinforced, high-strength nylon fabric. Puncture and cut-resistant but nevertheless light and flexible, the tyre adjusts quickly to the surface below. Without raising the weight or rolling resistance noticeably, it protects the carcass against foreign objects and contributes to a longer lifespan of the tyre. Tyres with the SafetySystem Breaker also provide good comfort properties.

SafetyPlus

For E-bikes, we have combined the SafetySystem Breaker with a highly elastic material. The result is an extremely puncture and cut resistant casing which, thanks to its high elasticity, gives especially low rolling resistance, saving battery power and the environment. The breaker also meets the demands of the higher speed e-bikes, of up to 50 km/h. The breaker is also adapted for the higher acceleration torque of e-bikes as well as the faster cornering speeds. The specialist tyre for fast e-bikes and rental bikes.

NyTechBreaker

Our new NyTech Puncture Protection has been developed based on the proven Continental SafetySystem Breaker. Its nylon fabric makes it resistant to punctures and cuts like Kevlar reinforced high strength fibres, but offers lower rolling resistance and reduced weight. The NyTech breaker sits between the SafetySystem and the PolyX Breaker® as a more effective puncture protection casing in the performance sector.

Puncture ProTaction – Worry-free throughout the day.

If you are looking for a reliable, value for money companion for every day use, choose a tyre with Puncture ProTaction Breaker. This robust GummiBreaker combines with the rubber-reinforced sidewalls of the tyre to guarantee a high puncture and wear protection. No frills tyres with a clear focus and durability.

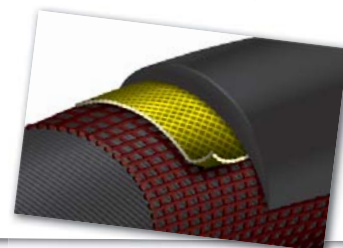

DuraSkin®

Tyres with DuraSkin® sidewall protection have to be able to roll with the punches. They are used under the harshest conditions. On messenger bikes, the tyres skid along curbs; on touring bikes, they cross continents without wearing out. In racing cycling, they have to endure tough tests such as the Paris-Roubaix. The high-quality polyamide fabric protects the tyre casing against the worst conditions. These tyres stand out thanks to their brown sidewalls.

Hardshell – MORE is what you get!!!

Puncture protection and mileage are the strengths of Hardshell-ProTaction. A wider PolyX Breaker®, the specialist against punctures under the tread centre and shoulders provides for great reliability. The three-ply – each layer with 60 TPI – carcass covers the entire tyre and makes it a real bastion against urban detritus. The outer sidewalls of the tyre are reinforced with DuraSkin® fabric providing even more reliability due to the casing being so well protected. Hardshell tyres are the puncture-resistant flagship amongst racing tyres – produced exclusively in Germany.

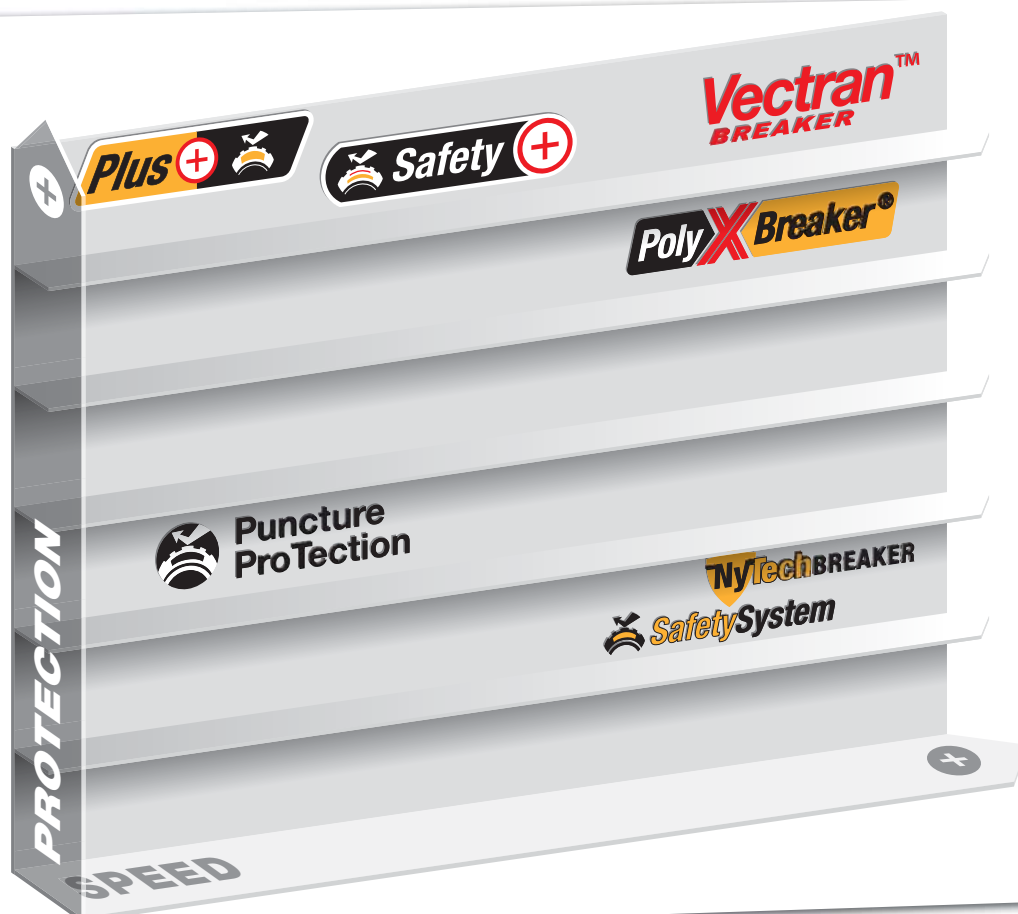

Competition tyres!

In serious competitions, sacrifices are sometimes made by riders looking for that extra 5%. Sometimes this means our GP SuperSonic is used. It features a high quality racing carcass but with no puncture protection. In the race against the clock, weight and rolling resistance are the top priority – the cyclist has to gauge the high puncture risk to him/herself.

BreakerTechnology in comparison

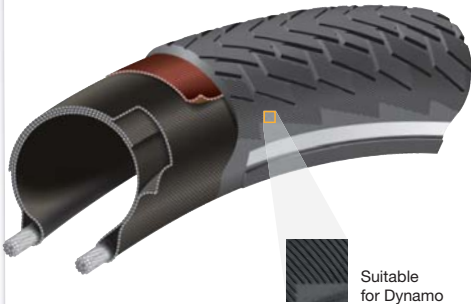

Deutsche Technik in detail

Dynamo – Preparation

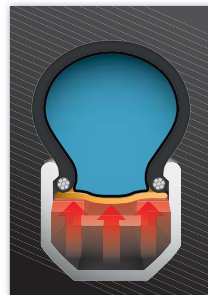

Tyres which have the Dynamo symbol have a special profiling in the side wall and are especially suitable for use with rotating dynamos. The Dynamo thus runs quieter and does not slip in wet conditions. Depending on the tyre model, the dynamo knurl design can vary.

Suitable for Dynamo

Caution – Heat build-up!

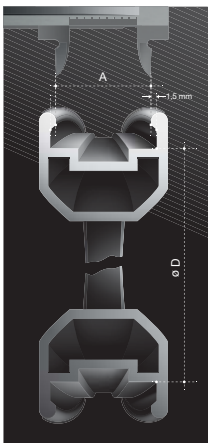

Within the cycling industry, an increasing number of rim profiles are now sealed, designed to be compatible with tubeless or tubeless-ready tyres. This means that there are no drill holes in the rim negating the need for a rim strip. In addition, carbon is becoming increasingly popular as a rim material. Carbon has low thermal conductivity resulting in heat build up along the tyre - rim interface during constant braking. In these sealed rims, the tube is in direct contact with the rim, which could fail with rising temperatures under constant braking. Continuous use of the brakes can result in temperatures of up to 240 °C, not unusual on long descents. Depending on the weight of the cyclist, braking intensity and the properties of the rim, even higher temperatures are possible. Latex and lightweight tubes are particularly vulnerable to this heat build up. Latex can tolerate temperatures of up to 130 °C and at temperatures above 200 °C, the tyre may even be damaged. Continental recommends the use of Easy Tape rim strips with any rim and especially with sealed rims because it protects the tube from direct heat. In general, with carbon clincher rims, the use of latex or lightweight tubes should be avoided. Continental expressly recommends the use of Easy Tape rim strips for riding in alpine regions as well as when using the Race All tube. Alternating or feathering the brakes gives the rim a chance to cool down, a simple, but effective technique to avoid the problem and ensure safe descending.

Tyre-rim combination.

For clarification on sizing, all Continental bicycle tyres are sized according to the ETRTO (European Tyre and Rim Technical Organisation) format: tyre width [mm] x tyre rim diameter [mm], for example 23-622. This is placed on the tyre sidewall. Alternative sizing such as 23x700C or 26 x 2.4 do not give clear information about the necessary rim size. That is why the internationally recognised ETRTO standard should always be used when in doubt. In general, Continental recommends that bicycle tyres only be mounted on hook

edge type rims because this type of rim holds the tyre more securely, especially with air pressures exceeding 3 bars. The measurements for hook edge rims, for example 13C-622, are given as; rim width in mm (size A), a "C" for crotchet ('hook' in English) and the rim bed diameter in mm (size D). If the size information on older rims is not legible, the rim width can simply be measured using a calliper from one hook edge to the other. An overview of which rim widths fit which tyres is available from ETRTO.

RIM SIZE											
NOMINAL TYRE SECTION WIDTH (mm)	18	13C

ECO – the energy saving tyres.

The tyres with the Continental ECO logo benefit from over 100 years of experience in the development of mopeds and motorcycle tyres. Optimized and recommended for e-bikes at speeds of up to 25 km/h, they guarantee low rolling resistance and good puncture protection with their extra high quality construction. The durability has been studied on e-bikes to prevent early wear and tear due to the additional drive force. Some models, such as the TopContact II, also have the ECE-R 75 test label which authorizes use on fast e-bikes up to 50 km/h.

Notes – Air pressure.

Air pressure directly influences the handling, durability and the rolling resistance of a bicycle. Only with the right operational pressure can a tyre operate to its full potential. In addition to tyre volumes and cyclist or system weight, the purpose plays an important role here. Each Continental tyre has a recommended air pressure on the sidewall and maximum inflation pressure specification. If the air pressure is too low, wear increases, and the risk of puncture damage and tyre slipping increases. Ageing cracks can also occur. Air pressure which is too high makes the tyre feel rigid as its optimal elasticity is not realised. Traction, grip and rolling resistance may get worse. All bicycle tyre systems continually lose pressure. For this reason you should check your tyre pressure frequently. Touring bike and mountain bike riders should check their air pressure at least once a month; racing cyclists once a week. When using light and supersonic tubes, the air pressure should be checked before each ride.

Notes – Weight.

Building light tyres is the declared goal of our developers and employees in our production facility. Occasionally however, there are small deviations from the weight information given in our catalogue. These result from tolerances in the tread thickness and rubberised material which cannot be avoided in the handwork of the manufacturing process. The weight information in the catalogue is based on the target weights which were determined in the pre-production series and is rechecked during the running production repeatedly. Deviations of up to 10 % of the target weights are thus possible according to the design.

Top quality extras.

Regardless of whether you are out on the racing bike, mountain bike, simply outdoors or in the workshop, Continental assures a perfect fit, top quality and a smart look with our clothing and accessories collection. A collection which will inspire you in the coming 2014 bike season and make sure that you are well presented, no matter what the situation!

Our clothing items and accessories, similar to our tyres, represent the highest quality and functionality, the renowned Conti quality!

CONTI™ Modular Shop System

Bicycle retailing is one area where an attractive, clearly laid-out presentation of goods is becoming more and more important. It must be convincing in its external appearance as well as its quality. The appropriate presentation for individual products creates an atmosphere where the customer feels at ease and gladly spends time gathering information about new products.

Brochure on demand.
